## DETAILED ACTION

### *Specification*

The disclosure is objected to because of the following informalities: The terms "weave", "interwoven", etc should be avoided since they are art specific terms related to a specific fabric forming process. To avoid confusion, the examiner suggests the terms: "knit", "knitted", "interlaced", etc. Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Re claim 1, the art specific term "weave" is inaccurate since the process involves knitting. The term "the bottom of the fabric section" is indefinite as it lacks clear antecedent basis.

Re claim 2, the art specific term "interwoven" is inaccurate since the process involves knitting. The term "the figure" is indefinite as it lacks clear antecedent basis .

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Mednick (3258942).

Mednick (3258942) teaches the invention as claimed including a knitting process with a trimming (20) involving the use of a knitting machine to weave a preset number respectively of warp (22) and weft (24) into a fabric section in a given length is characterized by that multiple warps and wefts being interwoven into multiple braids in cable stitch starting from the bottom of the fabric section (see figures 1 and 10). The fabric section is comprised of having each warp arranged longitudinally in parallel made into multiple continuous loops in sequence; each warp being respectively interwoven by at least two wefts(24, 26); a first weft and a final weft being respectively knitted from top to bottom in a fashion of the figure into first warp and a final warp; those wefts being continuously and alternatively interwoven though those warps either to the right or left until the fabric section in a preset length is attained; and starting from the bottom of the fabric section those wefts being knitted in sequence by passing through the warps into multiple braids to form the trimming. The braids are made into a corrugated, flushed, or serrated form. The curtain is made from natural yarn including cotton, linen, and silk, or synthetic yarn.
